SUMMARY

Results-driven **Backend Developer** with production experience designing and deploying scalable multi-tenant architectures, real-time communication systems, and high-performance REST APIs. Proficient in NestJS, Node.js, Go (Golang), and Redis caching, with a strong focus on data integrity, concurrency handling, and system observability (Grafana, Loki).

WORK EXPERIENCE

Programmer (Backend Developer) Aug 2025 – Present
PT. Semua Aplikasi Indonesia *Denpasar, Bali*

- Architected and engineered the core multi-tenant backend for **NontonPlus V2** (Hospitality IPTV platform) from scratch using **NestJS**, **PostgreSQL**, and **MongoDB**.
- Implemented low-latency bidirectional real-time telemetry and device communication protocols using **Socket.IO**.
- Engineered a scalable multi-tenant management service tailored for ISP clients with strict data isolation.
- Reduced database read-overhead and optimized session handling by implementing high-performance caching layers via **Redis**.
- Integrated object storage with **MinIO** and established end-to-end system health observability and log aggregation using **Grafana** and **Loki**.

Programmer Intern Feb 2025 – Jun 2025
PT. Semua Aplikasi Indonesia *Denpasar, Bali*

- Developed backend RESTful APIs for inpatient survey modules and real-time emergency nurse-call features on the **Nonton+ Hospital** application using **Node.js** and **Socket.IO**.
- Collaborated with cross-functional teams to test socket connection reliability and telemetry payload parsing across hospital room devices.

Programmer Intern Jun 2024 – Aug 2024
CV. Natusi *Mojokerto, Jawa Timur*

- Developed the digital medication and fluid administration tracking module for the emergency room (IGD) website of **RSUD Dr. Wahidin Sudiro Husodo**.
- Streamlined clinical data entry workflows, reducing manual documentation time for medical personnel using **Laravel** and **MySQL**.

Programmer Intern Jul 2020 – Sep 2020
PT. Anekapay Teknologi Indonesia *Kediri, Jawa Timur*

- Developed a concurrent web scraper using **Go (Golang)** to extract product catalogs, pricing, and merchant data from e-commerce platforms.
- Structured and parsed raw JSON marketplace data pipelines for downstream payment and commerce workflows.

KEY PROJECTS

Interactive API Playground & FinTech Gateway 2026
Go, Chi Router, SQLite (WAL), React, TypeScript *dwin-studio.my.id*

- Engineered an enterprise developer portfolio and single-binary server showcasing Go sub-millisecond telemetry and Clean Architecture.
- Implemented a zero-allocation Webhook HMAC-SHA256 signature verification engine and a Token Bucket rate-limiting simulator with sub-ms atomic overhead.

EDUCATION

Politeknik Negeri Malang 2022 – 2025
Associate Degree (D3) in Informatics Management *Malang, Jawa Timur*

SMK Telkom Malang 2019 – 2022
Vocational High School Diploma in Software Engineering *Malang, Jawa Timur*

TECHNICAL SKILLS

Languages & Backend: Go (Golang), TypeScript, JavaScript, Node.js, NestJS, Express, PHP, Laravel, RESTful APIs

Databases & Caching: PostgreSQL, MongoDB, SQLite (WAL Mode), Redis

Protocols & Architecture: Multi-Tenant Architecture, Socket.IO, WebSockets, Webhook HMAC Verification, Clean Architecture

DevOps & Observability: Docker, Git, MinIO (S3-compatible), Grafana, Loki, Postman, Linux

Languages: Indonesian (Native), English (Technical / Working Proficiency)
